

B. 38. The apparatus of claim 36 wherein the fastener is a fastener opening in the first surface in combination with a fastening component.

P 39. The apparatus of claim 36 wherein the fastener is a clamp adaptor and clamp.

40. The apparatus of claim 36 further comprising a second resting surface.

cont. 41. The apparatus of claim 36 further comprising at least one guide surface continuous with the ^{2nd} second resting surface and extending away from a plane of the second resting surface.

? 42. The apparatus of claim 41 further comprising a second target surface continuous with the guide surface and extending away from a plane of the second resting surface.

P 43. The apparatus of claim 36 wherein the fastener is a clamp.

P 44. The apparatus of claim 43 wherein the clamp is selected from the group consisting of c-clamps, pony clamps, Jorgensen clamps, EZ hold clamps, bar clamps, power press clamps, cabinet clamps, euro claw clamps, deep reach bar clamps, k-body clamps, hand clamps, ratchet clamps, quick grip bar clamps, vice grip clamps, and combinations thereof.

P 45. The apparatus of claim 44 wherein the clamp has at least one means for penetrating into a support structure to enhance securing the apparatus in place.

P 46. The apparatus of claim 43 wherein the clamp is an integral part of the apparatus.

47. The apparatus of claim 35 wherein the apparatus for installing building material further comprises an anti-rotational feature.

48. The apparatus of claim 35 further comprising a positioning feature.

49. The apparatus of claim 36 further comprising at least one material thickness spacer block.

50. The apparatus of claim 36 further comprising at least one adjustable support surface.

51. The apparatus of claim 35 wherein the apparatus for installing building material is made from a material selected from the group consisting of wood, metal, plastic, and combinations thereof.

52. The apparatus of claim 35 further comprising an adjustable tee support.

53. A method for installing building material comprising: positioning at least one apparatus for installing building materials;

attaching the apparatus to an existing structure;

positioning the building material on a target surface and moving the building material to a resting surface;

positioning the building material to a desired location and temporarily securing the building material; and

permanently securing the building material to the existing structure,

wherein the apparatus comprises, a first surface attached to a resting surface, wherein the resting surface is not in the same plane as the first surface, and at least one target surface extending away from a plane of the resting surface.

54. The method of claim 53 wherein the apparatus further comprises a fastener spaced apart from the resting surface.

55. The method of claim 54 wherein the apparatus further comprises at least one guide surface continuous with the resting surface and extending away from a plane of the resting surface, wherein the building material is contacted with the target surface in a vertical or near vertical position, moved to the guide surface, and moved to the resting surface.

56. The method of claim 54 wherein the fastener is a fastener opening in the first surface in combination with a fastening component effective for securing the apparatus to the existing structure.

57. The method of claim 54 wherein the fastener is a clamp adaptor and clamp.

58. The method of claim 54 further comprising a second resting surface.

59. The method of claim 54 further comprising at least one guide surface continuous with the second resting surface and extending away from a plane of the second resting surface.

(60.) The method of claim 59 further comprising a second target surface continuous with the guide surface and extending away from a plane of the second resting surface.

61. The method of claim 54 wherein the fastener is a clamp.

62. The method of claim 61 wherein the clamp is selected from the group consisting of c-clamps, pony clamps, Jorgensen clamps, EZ hold clamps, bar clamps, power press clamps, cabinet clamps, euro claw clamps, deep reach bar clamps, k-body clamps, hand

clamps, ratchet clamps, quick grip bar clamps, vice grip clamps, and combinations thereof.

BC
N 63. The method of claim 62 wherein the clamp has at least one means for penetrating into a support structure to enhance securing the apparatus in place.

N 64. The apparatus of claim 61 wherein the clamp is an integral part of the apparatus.

GA
N 65. The method of claim 53 wherein the apparatus for installing building material further comprises an anti-rotational feature.

66. The method of claim 53 wherein the apparatus further comprises a positioning feature.

- 67. The method of claim 54 wherein the apparatus further comprises at least one material thickness spacer block.

68. The method of claim 54 wherein the apparatus further comprises at least one adjustable support surface.

69. The method of claim 54 wherein the apparatus for installing building material is made from a material selected from the group consisting of wood, metal, plastic, and combinations thereof.

70. The method of claim 54 wherein the apparatus further comprises an adjustable tee support.
